Status: 05/2024

Print and apply systems for printing with two colors

Hermes C

Made in Germany

Print labels with two colors and apply them in real time

Hermes C is the world's first system for printing labels with two colors and applying them right after. It has been designed in particular for applications according to GHS.

Integral retraction enables individual labels be printed and applied on demand without loss.

All shapes of containers can be labeled, such as bottles, cans, barrels, buckets, cardboard boxes or pallets.

A modular system provides solutions for any application.

- Designed for industrial operation
- Easy to install in production lines
- Interface-based access to ERP and process control systems

For the labeling of chemicals and hazardous substances GHS and REACH demand standardized pictograms. The directives apply worldwide. Hazard symbols, such as empty diamonds, are not permitted.

Hermes C enables individual labels be designed and printed.

cab supplies labels and ribbons for Hermes C applications, certified to BS5609/3, if required (see page 11).

Sample label

Scopes of delivery, design and technical specifications correspond to the date of the printing. Subject to change. The data provided in the catalog do not represent any warranty or guarantee. See current data on www.cab.de/en/hermesc

Technical details

Graphic display

White backlighting enables good legibility. Depending on the installation, the display can be rotated in steps of 90°.

2 Navigator pad

In addition to the display, it enables simple menu control. The day-and-night design only features operable positions.

3 Ribbon retainer

Replacing a ribbon is no big deal thanks to three-part clamping axles.

4 Metal chassis

Resistance to torsion facilitates component assembly. Made of cast aluminum

6 Print positioning

It is implemented automatically after a new roll of labels has been inserted. Reference values remain intact even when a unit is switched off.

6 Print heads 1 and 2

Select pressing force according to the width of a label.

Automatic ribbon saving

Print head 1 is lifted along unprinted spots of a label and the ribbon is stopped while such labels are fed.

8 Pulling system

Ball-bearing transport rollers enable accurate print images.

9 Label unwinder

A swing arm and an integral brake enable labels be unwound at constant force.

Liner rewinder

Subsequent to all the labels been dispensed, the entire liner tape is rewound. Rolls can be removed easily on the basis of an expanding axle.

Cover

It can be assembled to prevent from dust or damage.

Required interfaces

- 1 RS232-C (limited access)
- 2 USB 2.0 slave
- 3 Ethernet 10/100 Mbit/s TCP/IP
- Two USB master for plugging an external control panel, a keyboard, scanner or service key
- 5 CompactFlash Type I memory card
- 6 Warning light indicating the state of a unit

Green Unit ready

Yellow Prior warning to a label web or a ribbon ending

Red Error

- Main valve for switching compressed air supply ON or OFF
- 3 External e-stop: In conjunction with plugging a main valve, compressed air supply can be suspended in the event of danger.
- Digital I/O: SUB-D, 25 pins, compliant to IEC/EN 61131-2, types 1+3 The inputs and outputs are galvanically isolated and protect from reverse polarity. The outputs are also short-circuit-proof.

 $^{^{1)}}$ Limitations may occur with small labels, slim or strongly adhesive materials. Critical applications require testing. $^{2)}$ A ribbon should be at least as wide as the liner material.

4126/4136 stroke applicators

Tamp-on padLabels are precisely pressed onto flat surfaces.

Tamp-on pad, spring-mounted Labels can be pressed even onto surfaces inclined by up to 8°.

Roll-on padLabels are rolled onto the flat surfaces of items during transport.

Silicone pads are available upon request

Stroke applicator

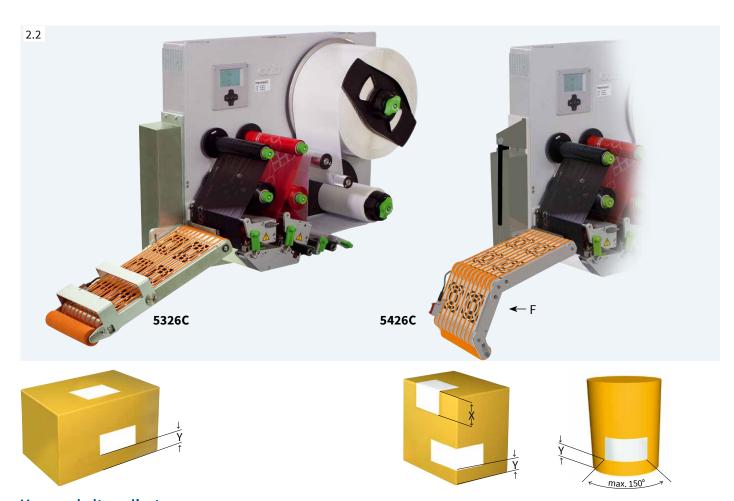

Labels are applied in real time from all sides onto packagings or items at rest or in motion (depending on the pad in use). Printed labels are taken over by a pad on the peel-off plate. The pad with a label are moved by a short-stroke cylinder in horizontal direction to the point of application. Labels are then applied onto items by a stroke cylinder. The length of the stroke cylinder defines the maximum distance of an item to the peel-off plate.

Stroke applicator		4126C-300		4126C-400		4136C-300 ¹⁾	4136C-400 ¹⁾

 $^{^{1)}}$ synthetic labels only $^{2)}$ calculated using labels 100 mm high and a print speed of 125 mm/s

³⁾ If an applicator immerses more than 25 mm, the cover of Hermes C must be adapted. ⁴⁾ Inside-winding is preferred with labels as high as 210 mm.

5326/5426 vacuum belt applicators

Vacuum belt applicator

Labels are applied in real time onto packagings or items in motion. Labels can be applied from all sides onto flat or cylindric surfaces. Corner-wrap applications are as well possible.

Printed labels are taken over on the peel-off plate. They move along a vacuum belt to the point of application and are applied, triggered by an external signal. While a label is dispensed, the next one can already be printed.

Accessories

	Extra Hermes C equipment
3.1	Cover V for vertical installation It prevents from dust and damage.
3.1	Cover H for horizontal installation It provides an additional cover plate on the side on which items are processed.
3.2	External control panel If the control panel of a printer cannot be accessed, an additional external one can be plugged. A slot for plugging a CompactFlash Type I memory card is provided, so is a USB host interface.
3.3	Standard keyboard USB, 115 keys
3.4	Memory card CompactFlash Type I for storing label formats, fonts, texts. Read / write graphics on a printer or PC
3.5	Product sensor, 25 pins for connecting Hermes C Labels are triggered to be applied as soon as an item has been detached, e.g. on a conveyor belt.
3.6	Interface plug All control signals can be attached to the I/O interface using clamping screws.

		Interface
4.1		Label selection - I/O box A maximum of 16 labels per box can be selected from a memory card by a superior control unit, such as a PLC.
		Connecting cable
5.1		Connecting RS232-C cable 9/9 pins, 3 m
		Extra applicator equipment

6.3		Unit for compressed air regulation providing an additional ON/OFF valve If operating Hermes C in a plant, compressed air required for the applicator can be switched ON and OFF externally. 4.5 bar default setting E-stop required
6.4		Circular connector 3 pins, M8, for plugging a compressed air main valve
6.4		Circular connector 4 pins, M8, for plugging an e-stop
6.5		Pressure regulating valve Installed on an applicator, it enables impact force be regulated.

Accessories

Dispensing labels and removing them by hand

A present sensor is required, a mount recommended. The label printer can be assembled with or without a cover.

PS11 present sensor

1. Dispensing automatically

Labels are detected in peel-off position. As soon as a label has been removed by hand, the next one is automatically printed.

2. Dispensing on demand

Printing and dispensing are triggered by touching the key on the present sensor.

2 TR2 hand switch

Dispensing is triggered on demand via the I/O interface. The hand switch is connected by cable.

Mount

for fixing a label printer

Adapter plate

The label printer is assembled. Alternatively, it can be installed directly to a production line, using the adapter plate and a profile.

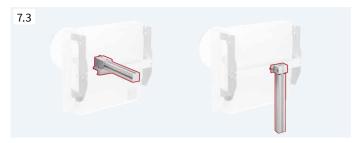

Profile

120 mm standard length Further lengths can be provided upon request.

Bracket

for assembling Hermes C in any orientation to a stand or a procuction line.

Clamped joint designed for 50 mm x 50 mm profiles

for moving a system in horizontal or vertical direction

Clamped joint designed for diameter 50 mm

for moving a system in horizontal direction or rotate it around an axle (diameter 50 mm)

Stands for assembly

1622 stand

for installing Hermes C vertically in a production line. A crank with a toothed bar allows heights and depths be adjusted. In addition, Hermes C kann be rotated by 360° around its axle.

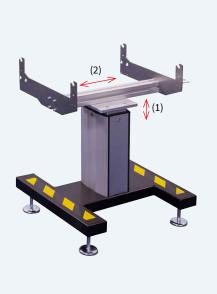

A unit for compressed air regulation can be assembled to the bracket, so can a warning light.

Technical data	1622 stand	
Leveling feet alig	nment in mm	± 15
Load capacity	kg max.	75
(1) Distance from the bottom of a label printer to the floo	or mm	150-1,100
(2) Depth transverse to the direction of transpor	rt mm	120
(3) Depth along the direction of transport	mm	100
(4) Rotatable	by °	± 90
Weight	kg approx.	40

7.5

1221 stand

for installing Hermes C horizontally in a production line. An internal spindle allows heights be adjusted continuously.

A unit for compressed air regulation can be assembled to the bracket, so can a warning light.

Technical data	1221 stand	
Leveling feet a	lignment in mm	± 15
Load capacity	kg max.	75
(1) Distance from the bottor of a label printer to the f	720-960	
(2) Depth along the direction of transport	± 180	
Weight	kg approx.	40

 $^{\scriptscriptstyle 1)}$ Further lengths can be provided upon request.

Labels and ribbons

- Printing labels with two colors in real time
- Designed for chemical products such as oils, paints or detergents.
- On barrels, buckets, containers, pallets, etc., resistant to acids and salt water
- Labeling according to GHS regulations
- Meeting British Maritime Standard BS5609, part 3. In this test, labels on an aluminum barrel must still adhere and be legible after a minimum of three months in sea water.

cab provides labels made of polyester or polypropylene as well as proper ribbons. Coordinate with cab.

If experiencing respiratory symptoms: call a POISON CENTER or doctor / physician. Store in a well-ventilated place. Keep container tightly closed. Contains 1,5-pentanedial

cab Produkttechnik GmbH & Co KG • Wilhelm-Schickard-Str. 14 · 76131 Karlsruhe / Germany · Emergency number +49 721 6626-0

Labels

Widths from 46 mm to 176 mm and heights from 20 mm to 356 mm are manufactured for Hermes C.

Ribbons

They match with Hermes C and the label materials and enable excellent print images at any time.

Resin resists to solvents and heat, wear and scratching.

Α1

Direct JScript programming

Any cab printer can be programmed directly using the JScript programming language. See manual. Best support for direct programming is given by the cablabel S3 software.

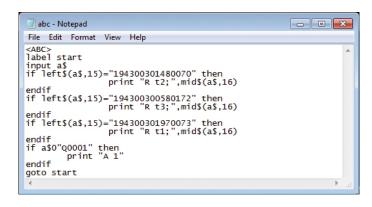

As an alternative, make use of any text editor.

SAP® Member Silver Printer Vendor Program Create a label using software Take the replace file using SAPScript; printout

Replace-Dateien und Integration in SAP*) R/3

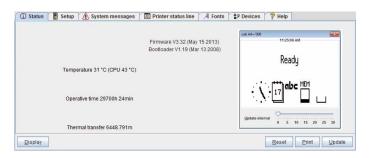

cab developed with SAP a replace method for controlling cab printers from SAP R/3 using SAPScript. Only variable data are sent by a host system to a printer. As a Silver Level partner in the SAP Printer Vendor Program, cab has access to SAP development environments for optimum printer support.

*) SAP and associated logos are trademarks or registered trademarks of SAP SE.

abc Basic Compiler

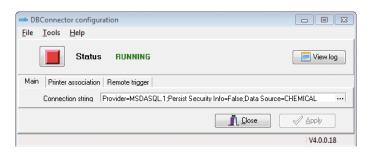

Integral to the firmware, it by simple Basic programming enables data be processed before they are edited for printout. For example, external printer languages can be replaced or data be imported from other systems such as scales or PLC.

Printer configuration on the Intranet / Internet

Integral HTTP / FTP servers enable a printer be controlled or configured, firmware be updated and memory cards be administrated using standard applications such as a web browser or a FTP client.

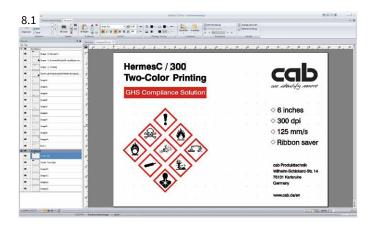

Administrators and operators on behalf of SNMP / SMTP are notified of states, alerts and errors by email or SNMP datagrams. Time and date are synchronized by a time server.

Database Connector

Printers in a network may access data from a ODBC / OLEDB database and print it on labels. Data can be rewritten to a database while print jobs are in progress.

Label software

cablabel S3 is provided for Microsoft^{*)} operating systems. Terminal servers / Citrix are not supported.

 $^{\star)}$ Microsoft is a registered registered trademark of the Microsoft Corporation.

cablabel S3 supports two-color design. Three features:

- Design
- Print
- Administrate

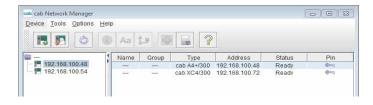

cablabel S3 opens up the full potential of cab devices. The user interface provides a comprehensive set of commands, for example different date, mathematical or logical formats.

Defining a label is first. Only when printing you decide whether to print on a label printer, a print and apply system or a marking laser system.

cablabel S3 enables a printer operate stand-alone, that is, select and print labels while not connected to a host system. Subsequent to a design, it provides all the files required for storing in the printer memory.

Modular design adapts cablabel S3 to requirements step by step. Plug-ins are embedded. Native JScript programming, for example, is supported by the JScript Viewer. The designer user interface and JScript codes synchronize in real time. Optional features can be integrated, such as the Database Connector or barcode verifiers.

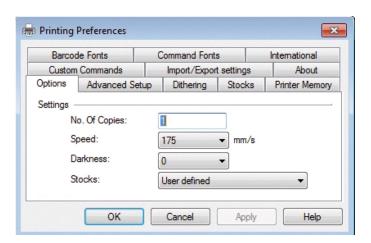

Supervising software

Administration Network Manager

Users supervise a number of printers simultaneously in a network. Printers can be controlled or configured, firmware be updated, data be synchronized and memory cards and PINs be administrated all from one place.

Printer drivers
